About 13,30,000 results (0.63 seconds)

Hobo spiders were **first reported in Idaho in the 1960's, but are now common throughout the Gem State.** These large spiders can be difficult to accurately identify because they are similar in appearance to many other species. Hobos are tan or gray with pale yellow markings on their abdomens.

Is the Hobo Spider Idaho's Most Feared Arachnid?
